Education

University of the Fraser Valley, Bachelor in Computer Information Systems – Abbotsford, BC, Canada Sept 2021 – Apr 2025

- GPA: 3.84/4.33
- Concentration: Software Development
- Specialized Training: Cisco LAN & WAN, Windows & Linux Server, DHCP, DNS, Group Policy Objects (GPO)
- Professional Development: Tech-Gear Cohort 2 (Web Developer), Tech-Gear Cohort 3 (Business Analyst)

Experience

Peer Tutor, University of the Fraser Valley – Abbotsford, BC, Canada Sept 2024 – Apr 2025
Subject: Systems Hardware Concepts (CIS 190)

- Supported and troubleshoot Linux and Windows-based systems hardware and OS-level issues for 30+ users, improving lab success rates through structured diagnostics and root-cause analysis.
- Created documented troubleshooting workflows using command-line tools and system diagnostics, reducing repeat configuration and performance issues by ~15%.
- Assisted students with OS installation concepts, hardware compatibility, system performance tuning, and fault isolation.

Lab Monitor, University of the Fraser Valley – Abbotsford, BC, Canada Sept 2024 – Dec 2024
Subject: Introduction to Networking (CIS 192)

- Provided hands-on systems and network troubleshooting support for 40–50 users per session, resolving DNS, IP addressing, VLAN, and connectivity issues in Linux-based lab environments.
- Diagnosed and corrected router, switch, and network service misconfigurations, reducing lab downtime by ~20–30%.
- Supported configuration and validation of TCP/IP, subnetting, and routing concepts aligned with production Linux networking fundamentals.

Lab Monitor, University of the Fraser Valley – Abbotsford, BC, Canada Jan 2025 – Apr 2025
Subject: Networking Theory and Applications (CIS 291)

- Supported deployment and administration of directory services, network file systems, and shared services in multi-user Linux and Windows environments.
- Configured, monitored, and maintained 50+ endpoints, printers, and shared resources, ensuring system availability and reducing service interruptions by ~30%.
- Performed system-level troubleshooting for authentication, access control, and service availability issues, resolving 80–90% of incidents during lab hours.
- Assisted with system configuration, user access management, and service validation in controlled enterprise-style environments using remote desktop.

Projects

Enterprise Linux Networking & Infrastructure Automation Project Dec 2025 – present
Multi-Site Enterprise Network Architecture & Security Lab.

- Designed and implemented a high-availability, Linux-integrated enterprise network topology using OSPFv2, VLAN segmentation, and routing optimization.
- Automated IP allocation using DHCP services and validated DNS and network service availability across multi-VLAN environments.
- Applied infrastructure hardening and configuration best practices (Rapid-PVST+, access controls) aligned with production system reliability and compliance principles.
- Documented configurations and troubleshooting procedures to support repeatable deployments and operational consistency.

Skills

Technical Skills: Level 1 and 2 Technical Support, Cisco router, switch, and firewall configuration, Windows, Linux, Mac, ServiceNow, Workstations installation, configuration, and maintenance, SSH, Powershell, RDP, MySQL, Microsoft Teams, Slack, Customer Service, VMware, VirtualBox, Documentation, Network troubleshooting, M365, Active Directory, Group policy, DNS, DHCP, Firewall, Backup and Recovery Concepts, User support, CCNA
