Summary

IT Systems & Business Analyst with a Bachelor of Computer Information Systems and hands-on experience supporting high-stakes environments—including major BC health authorities (PHSA, VCH, PCH, Fraser Health). Specializes in bridging enterprise infrastructure data with clinical operations. Proven track record of analyzing requirements, standardizing deployment workflows, and ensuring data integrity for large-scale initiatives like the New St. Paul's Hospital project. Adept at querying and analyzing complex data, translating technical metrics into actionable business insights, and optimizing clinical workflows while maintaining rigorous SLA compliance and zero downtime.

Experience

Deployment Technician, Microserve – Vancouver, BC July 2026 – present

- Analyzed endpoint deployment workflows and gathered site-specific requirements for hardware and software configurations, standardizing processes to achieve a sustained daily throughput of 8 system builds across health authority sites.
- Ensured critical IT asset data integrity and achieved 100% reconciliation accuracy between deployment and return records by querying and analyzing hardware data in Juriba and tracking lifecycle dispositions via Shiplink.
- Drove end-user adoption and mitigated disruption to clinical workflows by validating software requirements against user profiles and managing service requests to resolve technical issues during system handoffs.
- Acted as the primary liaison between cross-functional teams (Event Planners, Engineers) and health authority stakeholders, coordinating deployment schedules and reporting on system processes to ensure on-time project delivery.

Field Service Technician, NetworkIT – Burnaby, BC July 2026 – Aug 2026

- Directed multi-site technology deployment projects, driving a 28% increase in on-time completion by gathering site requirements, analyzing project scopes, and guiding technical teams through complex infrastructure rollouts.
- Optimized multi-site network performance by analyzing system configurations and producing comprehensive technical documentation to validate operational readiness for connected sites.
- Streamlined incident response workflows, reducing average diagnostic time by 40 minutes through the application of structured technical analysis and cross-departmental collaboration.

Business Analyst, Fraser Valley India | University of the Fraser Valley – Chandigarh, India June 2023 – Aug 2023

- Directed requirement gathering and prioritization utilizing the MoSCoW method, ensuring agile development workflows remained strictly aligned with core business objectives.
- Conducted comprehensive quantitative data analysis across a repository of thousands of assessment questions, mapping frequency patterns to restructure and optimize educational materials.
- Translated functional requirements into comprehensive mobile application wireframes, designing an intuitive user interface that optimized the digital customer experience.
- Orchestrated the end-to-end delivery of a driver licensing application, successfully streamlining user study workflows and enhancing overall service delivery.

Education

University of the Fraser Valley, Bachelor in Computer Information Systems – Abbotsford, BC, Canada Sept 2021 – Apr 2025

- Four-year degree, GPA 3.84/4.33 — concentration in Software Development
- Relevant Coursework: Database Management (SQL/MySQL), Systems Analysis & Design, Programming (Python, Bash), Networking, IT Project Management

Skills

Data Analytics & Database: SQL, MySQL, Python, Relational Database Concepts, Data Integration & Manipulation, Performance Benchmarking, Quantitative Data Analysis, Microsoft Excel, Data Integrity Auditing

Business & Systems Analysis: Requirements Elicitation (MoSCoW), Clinical Workflow Analysis, Process Optimization, Root-Cause Analysis, Continuous Quality Improvement, User Acceptance Testing (UAT)

Project & Stakeholder Management: Agile Project Management, Stakeholder Engagement, Cross-functional Coordination, ITSM (ServiceNow, Juriba, Shiplink), Technical Documentation, KPI Reporting

Healthcare IT & Infrastructure: Healthcare IT Deployments (New St. Paul's Hospital), SLA Compliance, Indigenous Cultural Safety Principles, Active Directory, Cisco LAN/WAN, Windows/macOS Endpoint Management
